

BABY HAMMOCK ASSEMBLY

See also our website
Hojdakovak.cz

1. Start with the spring: check whether the safety rope passes through the spring, the snap hook and the chain link. Check the tightness of the knot (figure 8 bend knot). Check the knot tightness regularly.

2. Insert the chain link in the prepared suspension system and screw it closed.

3. **ATTENTION! THE ROPE MUST PASS THROUGH THE CHAIN LINK, THE SNAP HOOK AND THE SPRING! Adjust its length according to your baby's weight. If the spring is deformed or ruptured, the hammock should remain suspended above ground on the safety rope.**

4. Take the textile sling: at its upper ply, fold the material into small plies so it will fit into the snap hook.

5. Insert the plied material into the snap hook and close the snap hook. You will place the baby into the hammock from the side, where the sling is fitted with ribbons.

6. Insert the mattress into the sling.

7. Arrange the sides of the sling in plies and insert the wooden spacing bars into their holders.

8. Tie the side ribbons together to make a small bow.

9. Make a loop on each end of the pul rope and insert one of these into the snap hook.

10. Now you can put your baby in :)

Check regularly the correct installation of the hammock, the tightness of the safety rope knot, and the solidity of the suspension.

INSTRUCTIONS FOR USE

Dear Mom, Dear Dad,

We are very happy that you have chosen our baby hammock intended for babies since their very birth. You are holding a product that we have manufactured with love in the Czech Republic, in cooperation with Czech manufacturers and suppliers, using high-quality natural materials. By purchasing this product, you are helping the development of sheltered workshops.

Thank you!
Your Hojdakovak Team

Calms your baby and
rocks him/her to sleep

Provides peace for
Mom and Dad

Helps the spine
to develop correctly

Natural materials
have been preferred

Our Hojdakovak hammock soon calms your baby down and provides him/her with much needed good quality sleep. The spring provides rhythmical up-and-down rocking - the same rocking your baby used to experience with his/her mother walking during her pregnancy; it makes him/her feel safe. This is why babies like all kinds of rocking.

Your baby will lie in the hammock with slightly curved back and legs bent to the body. Most physiotherapists recommend carrying babies in exactly this posture, as it helps correct spinal development and reduces colic. Not only will your baby relax thanks to the hammock: so will his/her mother who thus will have more time for herself and for the rest of her family.

Our baby hammock was awarded a TÜV quality certificate and complies with stringent EU general product safety standards (EC Directive 2001/95/EC)

PURPOSE

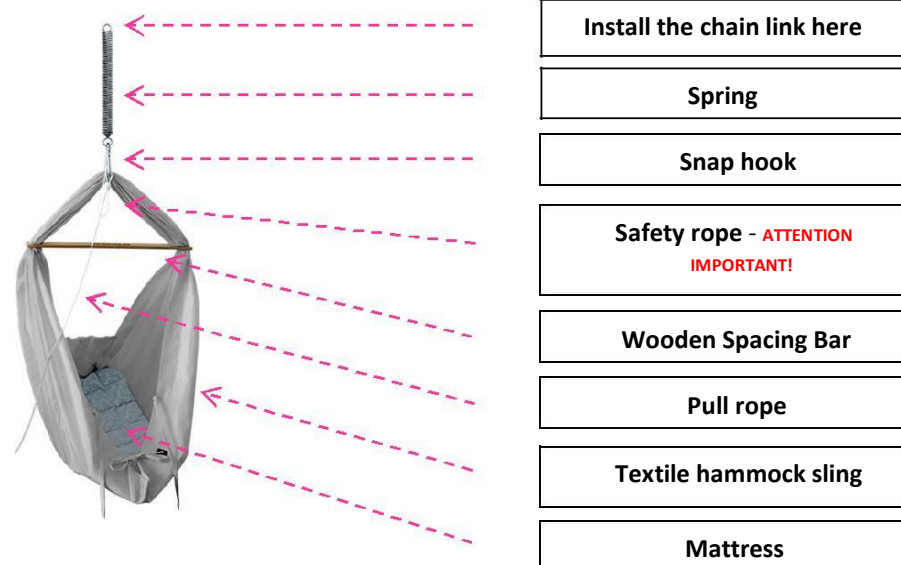

The Hojdavak Baby Hammock is intended for **rocking to sleep, rest and continuous sleep of babies** aged 0 to 9 months. Its maximum bearing capacity is **15 kg**. Our baby hammock is **certified** and therefore complies with stringent EU general product safety standards (EC Directive 2001/95/EC). Any use or conditions of use other than specified by the manufacturer are prohibited!

WARNING

Any modification of the product that might negatively impact its safety and the health of the baby is prohibited. Do not exceed the maximum bearing capacity as this will cause risk of deformation or rupture of the spring. To rock the hammock, pull the pull rope downwards. **Do not ever leave your baby unattended.** The manufacturer is not liable for any accidents. The hammock is not intended for playing. Do not suspend the hammock near any open fire or other strong heat sources. Install only in places that can safely bear the resulting load. Be aware of plasterboard ceilings or other ceiling/wall coating. Check the solidity of all screws and supports by applying a load, using your own weight. **Check the solidity of the suspension and the right installation of all parts of the hammock on a regular basis.** After unpacking the product, all plastic bags used for packaging must be kept out of reach of children aged 3 or less.

CONTENT OF THE PACK

- Textile hammock sling made of 100% cotton, with a safety certificate
- Mattress of polyurethane foam with a buckwheat pod layer; orthopaedic and non-allergenic; with thermal properties preventing sweating; 100% cotton cover
- Spacing bar made of hard beech wood
- Stainless steel wire spring (may be used both at home and out in your garden)
- Snap hook
- Chain link
- Safety rope
- Pull rope
- Zip-closure textile bag

MAINTENANCE

Wash the textile sling at 40°C. The mattress is not washable due to the inserted buckwheat pods; clean any dirty spots with a wet cloth. For this reason, it should be protected with a cover - see our bio cover on sale. The product lifespan is at least 2 years.

DISPOSAL

Product disposal: When it has been irreparably damaged or is no longer usable, dismantle the product and separate its individual parts and materials; dispose of these in accordance with applicable law at the time of disposal.

WHERE TO HANG YOUR HAMMOCK

Finding the right place for your baby hammock is essential to its successful use! Install it in the room where you spend most of your time during the day, so as to be able to see your baby at all times. It should be a place where you can comfortably sit and rock your baby. This will give you the possibility to pay attention to your other children, to read or to work on your notebook while rocking the baby. For night-time use, the best solution is to install a second hanging place next to your bed.
